

Margarita Machine Instructions

Note: Our Margarita machines work the same way whether you've filled them with an alcoholic mix, a non-alcoholic slushie or smoothie mix, or a frozen coffee mix.

Important Machine Facts:

1. Machine must be plugged into a 20 amp, 110 volt dedicated circuit. The machine will not freeze the mix if it does not have the right power.
2. All countertop machines must be kept on their feet at all times.

Starting Up the Machine:

Do Not Start the Machine Without Mix in it!!

1. Keep ALL ingredients cold. The colder the mix the faster it will freeze.
2. Prepare your mix, as per the instructions, in the bucket.
3. Pour the mix from the bucket into the top of the machine.
4. Plug the machine in and turn it to auto (toggle switch on the front of the machine).
5. The mix should start to slush in approximately 60 minutes.

Using the Machine:

Make sure that you can see mix in the top of the machine at all times!

1. If you are making a second batch, mix up your second batch, as per instructions, right away and keep the mix cold. The colder the mix, the faster it will freeze.
2. Keep adding mix to the machine as the product is used.

Cleaning the Machine:

Don't forget to clean the bucket!!

1. When you are through serving, turn the switch to clean out (toggle switch on the front of the machine).
2. Put cold water in the machine and drain out until ALL product is out of the machine. Do not leave any product in the machine!
